

the proposed power levels are to high,for me to hear weak signals on the maritime mobile net on 14300 khz,as a relay station, also handle weak signal traffic on 7290khz and 7285khz and 3873khz and 3935khz in any kind of emergency!!let alone hearing voice of america,or any other foriegn broad casts.the cable tv noise has proven this point.the cable co.s have proven to be unresponcive.the power co.s are no better!! thank you.73's james b.robinson kb5tac
